Sid Valley Neighbourhood Plan: Analysis of Q1 Survey Responses Compared to Census Figures

- We received 1108 responses but only 1106 identified their age range
- We weren't previously clear about the population figure to use for comparison with the number of surveys returned. Although 14106 is the figure quoted in the Local Plan I wasn't able to verify the composition of this figure and it is likely to be a total population figure. However, the 2011 census figures above indicate that the NP area has an adult population of 11563, giving a response rate from eligible adult residents of 9.56%.
- The same census source gives the number of households as 6613. We received 712 completed paper and electronic surveys which represents a household completion rate of 10.76%
- Because of its popularity as a retirement destination Sidmouth has an elderly population profile. But even taking this into account it's clear from the table above that the 18-24 and 25-40 age groups were significantly underrepresented and the 65-74 age group was significantly overrepresented, in terms of the number of responses received. It's hoped that the initiatives currently being undertaken e.g. the Youth Survey, Focus Groups, the Business and Special Interest Groups survey, and the publicity drive in the town and local press will address this issue in the forthcoming second residents survey.
